**Installing and Configuring Windows 10**

## Exam A

### QUESTION 1

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains a single Active Directory domain named contoso.com. The domain contains two computers named Computer1 and Computer2.

A user named User1 is a member of the local Administrators group on Computer1 and Computer2.

User1 fails to access the Event Viewer logs on Computer2 from Computer1. User1 can connect to Computer2 remotely by using Computer Management.

You need to ensure that User1 can use Event Viewer on Computer1 to remotely view the Event Viewer logs on Computer2.

Solution: You start the Remote Registry services on Computer2.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer: B**

**Section: (none)**

**Explanation**

### QUESTION 2

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains a single Active Directory domain named contoso.com. The domain contains two computers named Computer1 and Computer2.

A user named User1 is a member of the local Administrators group on Computer1 and Computer2.

User1 fails to access the Event Viewer logs on Computer2 from Computer1. User1 can connect to Computer2 remotely by using Computer Management.

You need to ensure that User1 can use Event Viewer on Computer1 to remotely view the Event Viewer logs on Computer2.

Solution: You modify the Windows Firewall settings on Computer2.

Does this meet the goal?

A. Yes

B. No

**Correct Answer: A**

**Section: (none)**

#### QUESTION 4

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains a single Active Directory domain named contoso.com. The domain contains two computers named Computer1 and Computer2.

A user named User1 is a member of the local Administrators group on Computer1 and Computer2.

User1 fails to access the Event Viewer logs on Computer2 from Computer1. User1 can connect to Computer2 remotely by using Computer Management.

You need to ensure that User1 can use Event Viewer on Computer1 to remotely view the Event Viewer logs on Computer2.

Solution: You run winrm quickconfig on Computer2.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** B

**Section:** (none)

**Explanation**

#### QUESTION 5

You have a computer that has a local printer.

You need to share the printer.

Which two tools can you use to achieve the goal? Each correct answer presents a complete solution.

- A. net share from a command prompt
- B. Devices and Printers from Control Panel
- C. Set-PrintConfiguration from Windows PowerShell
- D. Set-Printer from Windows PowerShell
- E. Printers & scanners from the Settings app

**Correct Answer:** BD

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 6**

A user has a laptop named Computer1 that runs Windows 10 and has a 64-bit application named App1 installed.

App1 fails to launch and generates an error message indicating that the application is not supported on this version of Windows.

You need to ensure that App1 can run successfully.

What should you do?

- A. Create a package that includes App1 by using the Windows Imaging and Configuration Designer (Windows ICD).
- B. Create a fix in the Compatibility Administrator.
- C. Run App1 in the Standard User Analyzer (SUA).
- D. Use the Application Compatibility Manager (ACM) to create an inventory package.

**Correct Answer: B**

**Section: (none)**

#### **QUESTION 7**

You have a laptop that has a high resolution display.

The Change the size of the text, apps, and other items setting is set to 175%.

You install a desktop application name App1.

When you start App1, the visual elements are misaligned, and the application interface does not appear as expected.

You need to ensure that App1 is displayed properly without affecting how other applications are displayed.

What should you do?

- A. Create an AppX package for App1.
- B. Run App1 as an administrator.
- C. Modify the Compatibility settings of App1.
- D. Configure an AppLocker rule for App1.

**Correct Answer: C**

#### **QUESTION 8**

A user has a computer that runs Windows 10.

The user reports that it takes a very long time to start the computer.

You need to identify which user applications cause the greatest delays when starting the computer.

Which tool should you use?

- A. Performance Monitor
- B. System Configuration
- C. Resource Monitor
- D. Task Manager

**Correct Answer:** D

#### **QUESTION 9**

You have a computer named Computer1 that has the following four hard disk drives installed:

- Drive 1: A 500-GB OS volume
- Drive 2: A 400-GB data volume
- Drive3: A 400-GB empty volume
- Drive 4: A 500-GB empty volume

You need to create a two-way mirror by using Storage Spaces. The solution must minimize data loss.

Which drives should you use?

- A. Drive 1 and Drive 2
- B. Drive 1 and Drive 4
- C. Drive 2 and Drive 3
- D. Drive 3 and Drive 4

**Correct Answer:** D

#### **QUESTION 10**

Your company is developing a Universal Windows Platform (UWP) app named App1. App1 is not published in the Windows Store.

You are provided with an AppX package for App1.

You need to install App1 locally.

What should you do first?

- A. From a Group Policy object (GPO), add a software installation package.

- B. From the Settings app, modify the For developers setting.
- C. Set the AppX Deployment Service (AppXSVC) to Automatic and restart the computer.
- D. Disable User Account Control (UAC).

**Correct Answer:** B

**QUESTION 11**

You purchase licenses for several apps from the Windows Store and you list the apps in your Windows Store for Business.

You need to tell users how to install the apps.

What should you instruct the users to use?

- A. the Windows Store app and a Microsoft account
- B. a web browser and a Microsoft Azure Active Directory (Azure AD) account
- C. the Windows Store app and a Microsoft Azure Active Directory (Azure AD) account
- D. a web browser and a Microsoft account

**Correct Answer:** C

**QUESTION 12**

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

*Start of repeated scenario*

Your network contains a single Active Directory domain named adatum.com.

The network contains five servers configured as shown in the following table:

Server name	Domain/workgroup	Role
DC1	Adatum.com	Domain controller
DC2	Adatum.com	Domain controller
Server1	Adatum.com	Member server
Server2	Adatum.com	Member server
Test_Server	Workgroup	File server

All of the servers run Windows Server 2012 R2.

Test\_Server has a shared folder named ShareA. Only local users have permissions to ShareA.

The network contains a mainframe computer that is administered by using the Telnet protocol.

The domain contains four client computers configured as shown in the following table:

Computer name	Primary user
Computer1	User1
Computer2	User2
Computer3	User3
Computer4	User4

All of the client computers run the 64-bit version of Windows 10. User3 frequently accesses ShareA. Remote Desktop is enabled on Computer4.

Your company identifies the following requirements:

- Ensure that you can test unsigned device drivers on Computer1.
- Enable Credential Guard on Computer2.
- Run commands and cmdlets remotely on Computer2.
- Configure User Account Control (UAC) on Computer3 to prompt administrators for credentials when elevated privileges are required.
- Ensure that User1 can view and interact with a desktop session of User3.
- Ensure that User2 can use Telnet to manage the mainframe.
- Ensure that User4 can use Remote Desktop to access Computer4 remotely.

*End of repeated scenario*

You need to configure Computer3 to meet the UAC requirement.

What should you use?

- A. User Account Control Settings
- B. Credential Manager
- C. Security Options in the Computer Configuration of the Local Computer Policy.
- D. Security Settings in the User Computer of the Local Computer Policy.

**Correct Answer: C**

**Section: (none)**

### QUESTION 13

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

*Start of repeated scenario*

Your network contains a single Active Directory domain named adatum.com.

The network contains five servers configured as shown in the following table:

Server name	Domain/workgroup	Role
DC1	Adatum.com	Domain controller
DC2	Adatum.com	Domain controller
Server1	Adatum.com	Member server
Server2	Adatum.com	Member server
Test_Server	Workgroup	File server

All of the servers run Windows Server 2012 R2.

Test\_Server has a shared folder named ShareA. Only local users have permissions to ShareA.

The network contains a mainframe computer that is administered by using the Telnet protocol.

The domain contains four client computers configured as shown in the following table:

Computer name	Primary user
Computer1	User1
Computer2	User2
Computer3	User3
Computer4	User4

All of the client computers run the 64-bit version of Windows 10. User3 frequently accesses ShareA. Remote Desktop is enabled on Computer4.

Your company identifies the following requirements:

- Ensure that you can test unsigned device drivers on Computer1.
- Enable Credential Guard on Computer2.
- Run commands and cmdlets remotely on Computer2.
- Configure User Account Control (UAC) on Computer3 to prompt administrators for credentials when elevated privileges are required.
- Ensure that User1 can view and interact with a desktop session of User3.
- Ensure that User2 can use Telnet to manage the mainframe.
- Ensure that User4 can use Remote Desktop to access Computer4 remotely.

*End of repeated scenario*

On Test\_Server, you reset the password for User3.  
 You need to ensure that User3 can access ShareA.  
 Which tool should you instruct User3 to use on Computer3?

- A. the Get-Credential cmdlet
- B. Credential Manager
- C. Authorization Manager
- D. Active Directory Users and Computers

**Correct Answer: B**

**Section: (none)**

#### QUESTION 14

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

*Start of repeated scenario*

Your network contains a single Active Directory domain named adatum.com.

The network contains five servers configured as shown in the following table:

Server name	Domain/workgroup	Role
DC1	Adatum.com	Domain controller
DC2	Adatum.com	Domain controller
Server1	Adatum.com	Member server
Server2	Adatum.com	Member server
Test_Server	Workgroup	File server

All of the servers run Windows Server 2012 R2.

Test\_Server has a shared folder named ShareA. Only local users have permissions to ShareA.

The network contains a mainframe computer that is administered by using the Telnet protocol.

The domain contains four client computers configured as shown in the following table:

Computer name	Primary user
Computer1	User1
Computer2	User2
Computer3	User3
Computer4	User4

All of the client computers run the 64-bit version of Windows 10. User3 frequently accesses ShareA. Remote Desktop is enabled on Computer4.

Your company identifies the following requirements:

- Ensure that you can test unsigned device drivers on Computer1.
- Enable Credential Guard on Computer2.
- Run commands and cmdlets remotely on Computer2.
- Configure User Account Control (UAC) on Computer3 to prompt administrators for credentials when elevated privileges are required.
- Ensure that User1 can view and interact with a desktop session of User3.
- Ensure that User2 can use Telnet to manage the mainframe.
- Ensure that User4 can use Remote Desktop to access Computer4 remotely.

*End of repeated scenario*

You need to meet the Credential Guard requirement of Computer2.

Which two Windows features should you install? Each correct answer presents part of the solution.

- A. Windows Process Activation Service (WAS)
- B. Embedded BootExperience
